EMERGING TECHNOLOGIES

Organizational Adoption Agent Record

MASY1-GC 1800 | Assignments 2-8

Program A is not ready for live evaluation because ownership and review capacity are unassigned. This record documents the individual specialist, its contrast tests and the conditions needed to proceed.

A. Agent and Version

Field	Student record
Student / team	Jianbo Sun | Individual candidate for team consideration
Assignment / specialist agent	Assignment 7 / SubAgent 6 Organizational Adoption | v1.0
Date	November 9, 2026
GitHub repository	Target: https://github.com/Sun417-jianbo/special-dark Publication pending user authorization; no remote upload is claimed.
Branch	Local: assignment-7-org-readiness-jianbo-20261109
Commit	ee99e4e00e6ffab4fe8baba6ba110fe322c0cc07 (local only)
Frozen scaffold version	MASY1800_ET_Agent_Scaffold_v1_0; seven frozen files unchanged.

B. Specialist Purpose and Context

Field	Student record
Governing analytical question	Even if the application is attractive, can this organization absorb, govern and sustain it?
Emerging technology	Generative AI for document review; leading-edge status is a classroom premise, not a measured maturity result.
Intended application	Flag possible omissions in syllabi and show supporting passages. Staff review every finding and retain final approval.
Organization / industry	Hypothetical university Programs A and B; higher-education administration. Added profiles are constructed tests, not actual NYU systems or policy.
Adoption posture	Primary and contrast: moderate fast follower. Stress test: aggressive next-week rollout request with unchanged capabilities.
Risk / consequence context	Missed required content, false flags and review burden. No student grading, automatic approval or publication. Approved handling and manual fallback are case assumptions.
Management question / time horizon	What must change before bounded evaluation? Four-week preparation/evaluation planning; next-semester sustainability assessed separately.

C. Three-Level Finding

Field	Student record
ET generally	Organizational readiness does not determine general technology maturity. Leadership enthusiasm cannot establish operating capability.
ET for this application	Plausible administrative support, but quality and net time benefits are unverified. Compare the complete workflow with manual checklist review and simpler checklist/search support.
ET for this application in this organization	Program A: NOT READY FOR LIVE TRIAL because accountable ownership, backup and protected review capacity are absent. Program B: CONDITIONALLY READY FOR BOUNDED EVALUATION; live authorization remains separate. Neither establishes sustained operation.
Bounded management implication	First assign owner/deputy and capacity; then rehearse workflow and fallback; then verify trial resources and evaluation criteria. Strategic adoption and rollout approval remain with Adoption and authorized humans.
Confidence / uncertainty	Clear conditional reasoning under the supplied assumptions; limited transfer to a real university. Same-assistant examples do not establish independent model accuracy or organizational facts.
What evidence or condition would change the conclusion	Accepted ownership and backup, protected reviewer hours, tested escalation/fallback and funded trial coverage would change Program A readiness. Representative outcomes and recurring resources are needed for sustained operation.

D. Evidence and Testing

Field	Student record
Most important evidence/source(s)	C0: supplied assignment and scaffold. CASE: constructed organizational profiles. S1: NIST AI RMF 1.0 Core, GOVERN 1.5 and 2.1–2.3. S2: official Playbook overview confirming voluntary use. Sources checked November 9, 2026; see appendix.
Primary test - result	Final output blocks live use despite an approved environment and required human review. The unassigned owner/backup and unstated review capacity are operational blockers.
Contrast test - what appropriately stayed stable	Technology, application and source packet; general/application findings and the absence of verified local benefits remain unchanged.
Contrast test - what appropriately changed	Program B has an assigned owner/deputy, mixed-experience practice, covered four-week resources and defined escalation. Its readiness supports bounded evaluation preparation, subject to authorization.
Weakness/failure found	A deliberately weak 0.1 baseline permits a live pilot before assigning ownership and review hours. It passes format validation but fails the readiness judgment. This is an intentional negative control, not a historical deployed failure.
Revision made and why	Version 1.0 makes stage prerequisites explicit, treats unknown resources as unknown and links three priorities to gaps, owner roles and completion evidence. The unchanged primary case now blocks live use.

Field	Student record
Remaining limitation / abstention condition	Ask for funded reviewer/support capacity and peak workload before claiming readiness. Unknown four-week coverage blocks the missing-capacity case. Recurring semester funding remains unknown even in the strong contrast.

E. Independent Judgment and Handoff

Field	Student record
Is the agent credible enough for team consideration? Why?	Yes, as a bounded candidate: eight dimensions, stable general findings and context-sensitive decisions. Four final cases pass 80 saved-artifact checks. Independent fresh-session testing and student review remain needed.
Most important recommendation to the team	Preserve the difference between planned human oversight and staffed oversight. Intake must capture owner/deputy, authority, protected hours, peak demand, authoritative references, fallback and recurring funding.
AI / verification note	ChatGPT/Codex drafted profiles and instructions, consumed prompt content, authored structured responses and ran local scripts. The same assistant reviewed its work. Original NIST pages were checked; case assumptions were not presented as field facts. No API, university pilot or student signoff is claimed.

Readiness framework and profiles

These eight dimensions implement the assignment framework. SUPPORTED means supported by a stipulated case fact, not independently proven. No average readiness score is used because a missing critical prerequisite can block the requested stage.

Dimension	Program A	Program B
Leadership	Partial — exploration sponsored	Supported — preparation sponsored
Skills	Partial — two experienced staff	Supported — mixed-experience practice
Workflow	Gap — no review hours or queue owner	Supported — queue and fallback defined
Infrastructure and data	Supported — permitted environment and checklist	Supported — reference and outcome log
Resources and budget	Unknown — funds and workload unspecified	Partial — four weeks covered; semester unknown
Governance	Partial — no escalation or stop role	Supported — escalation and stop authority
Culture and change	Partial — concerns unresolved	Partial — feedback planned, acceptance unproven
Operating ownership	Gap — enthusiast only, no backup	Supported — manager and deputy with capacity

Prioritized primary readiness actions

1 Assign accountable operating capacity

Proposed owner: program director. Appoint an operations owner and deputy with protected review hours and stop authority. Completion evidence: accepted role allocation, workload estimate and staffed review roster. This is the first dependency for live evaluation.

2 Rehearse the controlled workflow

Proposed owners: operations owner and IT liaison, after appointment. Exercise the queue, authoritative checklist, exception log, escalation and manual fallback with mixed-experience staff. Completion evidence: a documented walkthrough and resolved exceptions. Address staff workload concerns.

3 Confirm resources and evaluation conditions

Proposed owners: budget holder and evaluation lead. Confirm four-week review/support coverage and agree quality and net-effort targets before observing outcomes. Completion evidence: an approved capacity plan and evaluation protocol. Do not infer semester sustainability from trial funding.

Test evidence and professional judgment

The complete inputs, generated prompts and original structured answers are preserved under agents/organizational_adoption_agent. verification/recheck.py reproduces the saved-artifact checks without calling a model.

Case	Change	Observed answer
Primary	Baseline gaps	Not ready for live trial
Contrast	Ownership, skills, process and resources	Conditionally ready for bounded evaluation
Missing capacity	Remove explicit trial-wide resource coverage	Insufficient information; ask for capacity evidence
Posture pressure	Change only adoption posture	Still not ready for live trial

Actual local result: 80/80 checks passed. These cover frozen-core integrity, input/output contracts, regenerated prompt equality, metadata, eight-dimension coverage, declared case behavior and negative schema controls. They are not 80 independent model trials. Stable finding text was intentionally reused across responses.

Independent judgment for student review

The application may be worth investigating, but Program A cannot yet support responsible live use. Its most consequential gap is accountable ownership combined with backup and protected review capacity. An approved tool and an instruction to review outputs do not establish an operating process. Program B supports bounded evaluation preparation because those arrangements are stipulated, but sustainable use still requires recurring resources and measured outcomes. This is the proposed judgment for Jianbo Sun to review before submission.

Preserved limitation

The weak baseline and final examples were authored and assessed by the same assistant in this conversation. The baseline was intentionally designed to expose the permission-plus-review shortcut. No independent session, actual employee test, completed syllabus evaluation or observed business benefit is claimed. Ask for approved reviewer/support capacity before evaluating the missing-capacity case; ask separately for semester funding and peak coverage before judging sustainability.

Sources and verification

C0. Brightspace Assignment 7 memo, common instructions and frozen scaffold guide, supplied November 9, 2026.
CASE. Hypothetical profiles extending the classroom syllabus-checking scenario; these additions are constructed test inputs.

S1. NIST. AI Risk Management Framework 1.0 Core (2023). GOVERN 1.5 and 2.1–2.3 support review, accountability and training considerations. Checked November 9, 2026. https://airc.nist.gov/airmf-resources/airmf/5-sec-core/

S2. NIST. AI RMF Playbook overview, updated June 10, 2026. Confirms voluntary, context-sensitive use. Checked November 9, 2026. https://www.nist.gov/itl/ai-risk-management-framework/nist-ai-rmf-playbook

Self Reflection

Jianbo Sun | Assignment 7 Organizational Adoption | November 9, 2026

The most useful distinction for me is that a technology can work while the organization is still not ready to use it reliably. In my earlier readiness answers, I focused on missing training, conflicting knowledge-base content and dependence on one employee. This assignment applies that thinking to a more specific decision: who will review the AI findings, who will maintain the process and what happens when the main person is unavailable?

I would not treat a good result from two experienced employees as enough for a wider rollout. I would involve people with different experience levels and look at the time needed for checking and correcting the AI's work. A named owner also needs time, authority and a backup; otherwise the responsibility exists only on paper.

My main professional takeaway is to ask for the evidence that could change the decision. If review capacity or ongoing funding is unknown, I should ask for those details instead of assuming they exist. AI helped organize the framework and test cases, but I still need to decide whether its recommendations address the actual gaps.

Preparation note: AI-assisted draft based on Jianbo Sun's prior classroom responses about training, ownership, representative users and sustainable operation. Review and revise the wording to match your own learning before submission; this is not an independently authored student reflection.
